

McMULLAN O'DONNELL DELIVERS TAILORED SOLUTION FOR CDE GLOBAL

McMullan O'Donnell provided the complete external glazing envelope for the impressive CDE Head Quarters Cookstown.

The curtain walling package utilized a silicone pointed system with high performance solar controlled glazing. It incorporated many complexities such as faceted screens, frameless bonded sash openings, exposed glass corners and large rooflights.

"The images below show the complexity of the convex and concave curves which offered some challenges however we were able to overcome these and are very pleased with the final outcome."

"Frameless bonded sashes were utilized throughout the project with sash openings ranging to 2M in height. Perimeters of the glass opening were enhanced with a ceramic frit, which boasted a sharp modern appearance to the sash openings. High level opening sashes were connected to and operated via the intelligent Window Master System, linked back to the BMS System. The 2 large rooflights with

automatic opening vents were also linked to the BMS System, opening at the unwarranted time of smoke presence, when CO2 emissions in the building are high, whilst then closing automatically in the event of rainfall.

This was a prestigious local project in which McMullan O'Donnell were proud to be involved in. MMOD delivers cost effective and tailored solutions, striving to provide excellence in performance,

security, long life, reliability and low maintenance.

Also In the commercial sector, this has included projects in leisure, educational, and retail.
