

McMullanO'Donnell

At McMullanODonnell we've been getting to know the needs of homeowners, builders and architects for 40 years. We are constantly refining and innovating our solutions to meet these changing needs.

Our windows and doors, which are designed and manufactured on site in Benburb, can be found in many homes throughout Ireland.

Choose your windows, doors and hardware from one of our many ranges, or mix and match to suit your project - **it's your build, your way, with McMullanODonnell.**

We Design. We Manufacture. We Install. We Guarantee.

71 Company
Profile

McMullanODonnell offer a range of windows and doors in both PVCu and aluminium, from casement to sliding sash windows, from moulded infill panel to composite doors, all supplied to provide excellence in performance, security, long life, reliability and low maintenance.

Based in Co. Tyrone, McMullanODonnell are already a household name throughout Ireland. All our products are manufactured to the stringent specifications demanded by today's market. We are aware of the different requirements of our customers and our windows and doors are designed and manufactured to the highest standards to suit all demands.

McMullanODonnell are developing constantly. This positive expansion is due to the company's continuous focus on top quality products and a high level of customer service. Our highly motivated employees ensure that customer service requirements and the company's standards are met at all times.

The company utilises the very latest developments in computer-aided machining and production to guarantee optimum precision. Our aim is to lead the market in all sectors. We focus on excellent craftsmanship, highly trained, customer orientated staff and continuous new product development.

Whatever your reason for deciding to install new windows and doors - old ones that need replacing, giving your home a face-lift, extra comfort and security for the family, or to lower energy ratings - you'll find the answer in our wide range of products. We believe your decision reflects your individual lifestyle. That's why McMullanODonnell offer products to suit a wide range of requirements.

Environmental *responsibility*

McMullanODonnell's success as a company is, in part, dependant on responsible environmental stewardship, including our approaches to natural resources, waste management and recycling, energy efficiency, air and water emissions and indoor air quality.

McMullanODonnell's employees are committed to ensuring that all company operations proactively comply with applicable environmental laws and regulations for the implicit purpose of protecting human health and the environment. McMullanODonnell's employees are encouraged to identify opportunities for integrating environmentally favourable solutions into operations, in order to maximise the long term benefits of the products we manufacture. McMullanODonnell specialise in using the most modern PVCu material which

Ecological responsibility is a fundamental principle of McMullanODonnell. This is true not only with regard to the selection of raw materials and production methods but also with regard to the development of our products and our extensive recycling activities.

provides important advantages both economically and ecologically. PVCu has an extremely long lifespan as it is particularly weatherproof and age resistant. In this context, PVCu provides decisive advantages beginning with environmentally friendly production through to the most advanced manufacturing methods and energy saving processes helping to reduce the consumption of energy and water. There are no costs for repainting since the surface is maintenance free.

Environmentally friendly processes are integral to McMullanODonnell's company philosophy - from production through to recycling. For it is particularly complex industrial production methods that create the need but also the great opportunity to minimise damage to the environment.

It's all in *the details*

Whilst standard white finish was the original choice, coloured woodgrain finishes are now becoming extremely popular. Some of the more popular colour choices are shown below - all are available in woodgrain finish. It is also possible to have differing colours externally and internally. Speak to your representative on all the options available. Woodgrain finishes are low maintenance with only the need to wipe with a damp cloth.

Energy Ratings

- Provide a simple easy method for comparison of the overall energy performance of windows
- Measure U-value, solar gain and air leakage
- Are classified in bands A-G where A is the best
- Are customer friendly, consumers are familiar with the system used on electrical goods

In recent years, glass technology has made great strides. It began as a way to save energy bills. Now it is also about saving the planet.

McMullanO'Donnell's PVCu windows use soft coat Low 'E' glass as standard to ensure you have the level of comfort and peace of mind you want from your windows. As well as saving money through reduced fossil fuel consumption it makes the air we all breathe a little more breathable.

A window's energy performance has traditionally been stated in terms of its U-value. However, some manufacturers may quote the centre pane U-value, whilst others quote the whole window U-value so therefore the performance of different products may not be readily comparable. Energy ratings are a new simple system of making accurate comparisons between suppliers.

Energy Window

A	B	C	D	E	F	G
---	---	---	---	---	---	---

Energy Index (kWh/m²/year)
(Energy Index certified by BFRC and based on UK standard window. The actual energy consumption for a specific application will depend on the building, the local climate and the indoor temperature)

The climate zone is:

Thermal Transmittance (U-value)	1.4 W/m ² .K
Solar Factor (g-value)	0.47
Air Leakage (L-value)	0.00 m ³ /m ² /h

09/B096
www.bfrc.org

This label is not a statutory requirement. It is a voluntary label provided as a customer service to allow consumers to make informed decisions on the energy performance of competing products.

Triple Glazing

*making you feel
warm inside*

As homeowners face up to the realities of ever increasing fuel bills, triple glazing will become a progressively more important consideration for fabricators and installers.

Adding triple glazed windows to a property will improve its energy efficiency. McMullanODonnell's triple glazed system incorporates a twin sealed unit and our custom designed bead co-ordinates with the contours of the sculptured profile.

A triple glazed standard specification window will allow you to achieve a U-value of 0.8, well ahead of the equivalent typical double glazed option of 1.4 for an A rated window.

The noise reduction benefits will vary depending on glass thickness and prevailing environmental conditions.

Take a look through *our windows*

Windows aren't just part of your home's framework. They can add light and life, warmth and beauty. By understanding the different types available and how they work, you can better match windows to your needs and your lifestyle.

Versatile and elegant, our comprehensive window range is designed to suit any style of architecture. What's more, we can tailor-make designs to reflect your personal taste and needs.

Relax in a home that's warmer and quieter. Our high performance frames, quality double glazing, weather tight seals and multi chambered profiles ensure that heat loss is kept to a minimum.

Vertical Sliding Sash

The sliding sash window, often referred to as a 'Georgian window', reflecting the period when this style reached the peak of popularity, is a classic window design.

The traditional timber sliding sash window although aesthetically pleasing, had many inherent weaknesses. So it was no surprise that many saw the replacement of timber sliding sash windows with new PVCu versions as an easy choice.

It took the latest computer aided 3D design systems, plus considerable investment to achieve the necessary combination of a slim, but strong and durable, frame.

It has a timeless elegance and beautiful proportions which enhance the appearance of almost any home - period or modern, town or country.

It is one of the few windows that can be opened, for ventilation or easy cleaning, without obstructing the exterior, for example a pavement or walkway.

It is no wonder that the vertical sliding sash window has remained a favourite design with builders and homeowners for centuries.

Of course, it is not the least expensive window you can find. Yet if you are a discerning householder, determined to reflect your standards, isn't your home worth it?

If your home has listed building status, is in a conservation area, or covered by any other planning regulation or legal covenant, you should consult the appropriate authority to clarify the position before replacing your windows.

Vertical Sliding *Features*

Beneath the surface 'good looks' of the vertical sliding sash window there are a host of design features to improve your window's performance and appeal.

Thumb locking cam catch

Optional deep bottom rail feature

Sculpted bead and decorative horn

Security restrictor

Authentic Georgian bar effect

Upstairs fire escape window option

Both sashes tilting inwards

GLAZING

All windows are designed with low energy glazed sealed units.

BALANCES

All windows are supplied with the appropriate spring balance fully installed to match the weight and size of the sashes.

SAFETY

All sashes are fitted with travel restrictors as standard, which limit the distance the sash will open.

PERIOD DETAIL

Period details available include the decorative horn feature. Various colours are available for the hook lifts, ring pulls, locking system and security restrictors.

STYLES

All window styles can be produced including features such as arched head top sashes and bay windows.

TILT OPTION

By making the most of modern designs and materials, the sliding sash window can be made so that either or both

sashes have an optional 'tilt inwards' facility* incorporating stay arms for safe use. This can help with ventilation and make cleaning much easier.

GLAZING BARS

To produce that aesthetic Georgian appearance, Neo glazing bars can be applied to the centre of the double glazed unit or, for the most authentic appearance, glazing bars can be added to both the inside and outside of the double glazed sealed unit.

Sun Lounges

a place to sit and relax

When you add a sun lounge to your home, you will bring new dimensions to your lifestyle. A sun lounge gives you an extra room, which you can use for whatever you choose - a den to relax in, a playroom for the children, a room for entertaining, or as a private retreat.

Above all, a sun lounge will increase space and light, bring your garden closer and boost the value of your home quite significantly.

At McMullanODonnell, we can design windows and doors in your sun lounge to complement your home, precisely to your instructions.

Our craftsmanship, products, materials, manufacturing facilities and attention to detail will bring value to your home and enjoyment to your life.

Take a walk *Through our doors*

Whether you need extra privacy, streaming light, or something in between, the type of doors you choose for your home can make a big difference to the way you live.

An entry door should be strong and solid, but should also integrate beautifully and seamlessly with the look and feel of your home. Our range of entry doors brings together the best in modern and traditional designs with the latest trends and technology.

All our doors are designed and constructed to be tough and endure the worst that Ireland's weather can throw at them. With the correct maintenance, your door will keep the same beautiful look for years to come.

Our range includes an extensive variety of designs, finishes and complementary fixtures. The possibilities are almost limitless. We hope it'll fire up your imagination. If you need more help, just ask us - we're here to help.

Patio, French & Lift & Slide *Doors*

Want to enjoy the feeling of more space, without the headache of extra building work? Want to bring more sunshine into your life? The answer could be in the selection of doors including French, Patio or Lift and Slide.

As with all McMullanODonnell products, quality is the hallmark of our doors. Insulation, strength and security are not sacrificed even in glass units of this scale and are fitted with special safety glass, as standard. You'll be pleasantly surprised to see how easy it is to improve your quality of life.

With the minimum of effort everything suddenly appears bigger and brighter. The garden becomes an extension to your home, and not only in the spring and summer.

Standard Panel Doors

Our entrance doors are available in a wide selection of styles and colours. Entrance doors are all individually made to your design and specification and to the highest standards possible.

HIGH SECURITY FULLY KEY CONTROLLED ACTION

Our entrance door comes with security built-in. Every door comes with a 6 pin high security cylinder bump pick and snap, that offers a key operated cam with a maximum of 50,000 combinations.

MULTI-POINT LEVER OPERATED HOOK LOCK

This high performance lock offers two high tensile steel hook dead bolts and four rollers, where it can be fitted in and an extremely strong high tensile steel deadlock.

THERMALLY BROKEN LOW THRESHOLD
High quality aluminium low safety threshold.

Commodore Composite Doors

If you are looking for the ultimate in home security without compromising on good looks, then look no further than the **Commodore** composite door.

Based on the same Monocoque construction that was developed to make racing cars both strong and light, the Commodore is a rugged performer designed to withstand the most determined attacker.

At the heart of every Commodore is a reinforced internal frame combining 9mm composite with a high density core material to resist physical attack as well as keeping heat in and noise out. Bonded to this is an attractive, scratch resistant ABS skin to ensure the Commodore has great looks to match its strength.

Add to this a high-integrity, multi point locking system and you have a door that is a serious problem for the most determined intruder.

The Commodore may be a heavyweight performer but it still retains a light and easy feel in everyday use – and it will stay that way for many years to come.

Choose the Commodore and you can be sure to keep out more than intruders.

Its unique construction ensures a higher level of both heat and sound insulation than any conventional timber or PVCu door. Its fully rebated edge with double weather seals keeps out rain and draughts too.

Architectural *Aluminium Systems*

McMullanODonnell are leading specialists in the design, manufacture and installation of high performance, architectural aluminium systems.

Working with leading contractors we offer single source responsibility for the delivery of aluminium windows, curtain walling, doors and associated products. McMullanODonnell have a wealth of experience and product selection knowledge, with a proven ability to deliver to time, cost and safety demands.

Our extensive product range will satisfy and exceed most requirements and can provide you with a truly bespoke solution. Aesthetic appeal goes hand in hand with technical reliability and flexible application. Most importantly our systems fulfil the latest energy performance requirements and comply with the standards set by the centre for window and cladding technology (cwct).

Peace of mind *for the customer*

As specialists in the window and door industry McMullanODonnell have always been committed to investing in state-of-the-art production machinery.

After identifying the need to take a proactive approach to develop and enhance our windows by focusing on energy efficiency, the company invested in a new IGIS Sealed Unit Line and Cooltemper Toughening Plant to give us complete control over the manufacturing process.

This facility provides McMullanODonnell with the ability to deliver the most energy efficient, environmentally friendly solution to our customers. The company manufactures sealed units in-house using glass that is the most energy efficient low-E glazing product available under the window energy rating scheme. The insulated sealed units and toughening products are manufactured in strict accordance with BS EN 1279 and BS EN 12150.

To achieve this standard our products have been independently evaluated to ensure that they conform to the stated standards and our quality system is assessed to ensure we can produce products to the standard required. Not only do our products and systems undergo rigorous initial assessments but they are subjected to follow-up independent audit testing on an ongoing basis.

The use of such cutting edge machinery ensures McMullanODonnell are able to manufacture an energy efficient sealed unit that compares favourably with any other product currently available in today's market. It gives us complete control of the overall finished product, which in turn means we can meet the stringent expectations of our customers on time, every time.
